

IMAGINiT Clarity 2022 Adds AutoCAD Task Processing and Deepens Secure Data Integration for Autodesk Revit Users

BALTIMORE, MD – May 17, 2021 — IMAGINiT Technologies has released Clarity 2022, an enterprise level suite of products that improves building information model (BIM) integrity and collaboration via access to business insights, metrics and time saving automation. With the arrival of the 2022 release, [IMAGINiT](#) Clarity has added Autodesk AutoCAD task processing, extending this new functionality to Autodesk Revit teams as well as AutoCAD and Autodesk Civil 3D users in AEC Firms. Alongside new data-integration and security enhancements that further collaboration across teams and projects, Clarity's latest iteration now also supports Revit 2022 and all versions dating back to Revit 2018.

"Clarity has long been the automation and collaboration solution for both *Engineering News Record* Top 100 firms as well as mid-sized firms who are looking for efficiencies while working on complex BIM projects," says Bill Zavadil, president, IMAGINiT Technologies. "The innovations contained in our latest release unlock new value for AutoCAD users by mining millions of data points and bringing this information to the forefront via intuitive dashboards allowing managers to quickly make more informed decisions."

Enhanced Data Integration Improves Business Decisions

Data is vital to making more informed decisions. That is why Clarity is now designed to work in conjunction with business intelligence tools such as Power BI and Tableau to deliver unprecedented visibility into model health, Autodesk Revit performance, and a variety of Revit project data.

Additional Security Options Secure Private Data

For remote collaboration environments, Clarity 2022 offers additional security options to enable team members to securely connect with data and view reports across projects. Visibility into model data can now be based on user access within Clarity, giving different team members unique access to data as the project requires.

New Tasks, Tools & Reporting Dashboards Reduce Design Time

Clarity's improved task reporting dashboards simplify the complex, offering managers greater insight over the hundreds or thousands of tasks they run per project. It not only identifies model and task errors, but now also recommends actions required to resolve issues. This automated and proactive approach eliminates long-term problems while improving model performance and staff efficiencies.

About IMAGINiT Technologies

[IMAGINiT Technologies](#), a division of [Rand Worldwide](#), advances the way architects and engineers design, develop, and manage projects. Customers of this leading professional services and technology company include organizations in the building, infrastructure, manufacturing, and facilities management industries. Organizations of all sizes work with IMAGINiT Technologies to gain competitive advantages through expert technology consulting, implementation, training, and support services. As one of the world's largest integrators of Autodesk 3D design and engineering software, the team leverages unrivaled industry experience to design systems that accelerate innovation while improving project quality and profitability.
