

Rand 3D Experts to Discuss Product Lifecycle Management (PLM) Best Practices at Product Innovation Congress 2017

*Rand 3D Experts Provide Best Practice Recommendations for Successful
Evaluation, Implementation and Adoption of PLM Solutions*

OWINGS MILLS, MD – October 16, 2017 – As a sponsor at the [Product Innovation Congress 2017](#), [Rand 3D](#) experts will meet with delegates to share key insights on how PLM and CAD software solutions help companies solve complex challenges in innovating their product development processes. Beyond the software, Rand 3D's experts will also display a range of educational solutions, including in-class and online training, as well as custom documentation solutions to help companies ensure consistent use and adoption of industry leading PLM solutions from Dassault Systèmes and PTC. The Product Innovation Congress takes place in Fort Worth, Texas on October 16-17, 2017.

“When it comes to PLM, every successful implementation is a unique and complex process that includes many stakeholders,” says Meghan Foster, director of sales for Rand 3D. “We’re excited to be able to meet with congress delegates, to listen to their business challenges and needs and discuss the comprehensive solutions our experts can offer through software, consulting, in-classroom and online training, and custom courseware materials.”

In addition to providing customers with access to Dassault Systèmes software, Rand 3D provides custom implementation, consulting and training to optimize all aspects of PLM rollout and adoption. Using a variety of learning styles and knowledge assessment tools, Rand 3D's in-class and virtual training classes identify and address skills gaps across the PLM team and increase on-the-job productivity. Custom workflow documentation takes this a step further, enabling consistent usage of the new tools across all users and supporting the successful adoption of PLM solutions.
